GALEN, PARDALAS, AND SUNDRY DELIGHTS  
FOR THE STUDENT OF ANCIENT GREEK MEDICINE  
Klaus-Dietrich Fischer

FEW scholars interested in ancient Greek medicine are aware of the fact that what they are looking for may be found not in a Greek manuscript, but in a Latin codex, containing a translation from the Greek. In general, they have heard of the translations of Hippocratic works into Latin in late antiquity, but they are less sure about other translations from the same period, for instance those of some works of Galen. At present, Galen's *de sectis* is known from one main ms.; his two books *ad Glauconem de medendi methodo* were immensely popular, to judge by the number of manuscripts that transmit them, and became part of the compilation known as either *Passionarius Galieni* or *Gariopontus* (the name of the compiler, active probably just before 1050), which in its turn is found, according to Eliza Glaze, in more than fifty mss. This late antique Latin translation was also the version printed in Diomede Bonardi's edition of the complete works of Galen in Latin (F. Pinzi, Venezia, 1490).<sup>1</sup>

Galen's extensive compilations of recipes, the *de compositione medicamentorum per generaa* and *de compositione medicamentorum secundum locos*, as well as his writings on antidotes and the theriac,<sup>2</sup> may also have been translated into Latin, albeit perhaps only in small portions. These excerpts survive in Latin collections of recipes known as antidotaries, a designation that became common only with the School of Salerno (roughly in the 11<sup>th</sup> century). Some of these antidotaries were edited by the young Henry E. Sigerist, and even specialists often believe that Sigerist had edited all there was, certainly as far as the pre-Salernitan period was concerned. As we shall see, this is by no means the case. Material similar to that printed in Sigerist's edition can be found, waiting to be edited, in a good number of manuscripts listed by Augusto Beccaria, and may run from a few isolated recipes at a time to several hundred pages in the large-format *codex Cassinensis* 69 (p. 261a-p. 475b), which has more than 700 recipes! While Sergio Sconocchia discovered some recipes from Scri-

<sup>1</sup> Conveniently available from the internet site <http://www.bium.uniparis5.fr/histmed/medica.htm> (accessed June 8, 2009), where one also finds the Latin translation of Aetius I will refer to later.

<sup>2</sup> In the volume *Galen on Pharmacology. Philosophy, History and Medicine*, ed. by Armelle Debru, Leiden etc. 1997 («Studies in Ancient Medicine» 16), see especially Vivian Nutton's article *Galen on the-riac: problems of authenticity*, pp. 133-151. I also wish to thank Vivian for responding very quickly to my queries and helping me to improve the representation of some sections of this article with his remarks. For an edition of the Arabic text of Galen, *de theriaca ad Pisonem*, see Lutz Richter-Bernburg, *Eine arabische Version der pseudogalenischen Schrift De Theriaca ad Pisonem*, diss. phil. Göttingen, 1969. On p. 3, Richter-Bernburg refers to a study of the Greek text of *Ad Pisonem* by Friedrich Holtiegel, which had not been completed by the time Richter-Bernburg was writing. I have been unable to find traces of Holtiegel's work.

bonius Largus in this collection,<sup>3</sup> the bulk of the material there comes from the Greek, either directly or via other, earlier collections.

Cass. 69 (C) is dated to the end of the 9<sup>th</sup> century,<sup>4</sup> whereas Sigerist's earliest item (Antidot. Lond.)<sup>5</sup> in London, British Library, Harley<sup>6</sup> 5792 (CLA II 203), is assigned to the 7<sup>th</sup>/8<sup>th</sup> century, which makes it one of the oldest medical mss. in Latin.

In Cass. 69, as in many similar collections, the recipes are listed *per genera*, starting with antidotes, running to a total of 102 in all. It is in this section that we find (as no. 25, p. 281a-283a)<sup>7</sup> a description of the benefits deriving from the use of theriac salts,<sup>8</sup> and where a person by the name of Pardalas is mentioned:

de salibus theriacis quid possint.

**16.**<sup>9</sup> Boni sunt non solum infirmis. sed etiam sanis. Addunt etiam delectationem cibi et potus faciuntque digestionem,<sup>10</sup> <h>ilaritatem vultus pr<a>estant et omnes sensus acuciores redundunt. Suffusiones oculorum nondum solidas, dum adhuc est uisus, solbunt potentissime nec pati sinunt humorum suffusionem quibus cotidie da<n>tur. Flegma optime solbunt purgationes<que> menstruas qu<a>e deti-

**16.** Theriac salts are not only for sick people, but also for those in good health. They enhance also the enjoyment of food and drink and aid the digestion, they provide cheerfulness of countenance and make all senses sharper. Cataracts which are not yet solidified, while (some) vision is left, they resolve with great power and prevent the flowing down of humours if ad-

<sup>3</sup> See K.-D. Fischer and Sergio Sconocchia, *Nuovi excerpta scriboniani tra Tardo antico e Medioevo*, «RFIC» 136, 2008, 267-311, with the bibliography cited there. Cass. 69 also contains the full text of Plin. phys. Bamb., as Sconocchia recognized (Önnerfors' 1975 *editio princeps* is based on the incomplete text in Bamb. med. 2); it precedes the antidotary.

<sup>4</sup> For a detailed description of this and other medieval Latin mss. mentioned in this article, cf. Augusto Beccaria, *I codici di medicina del periodo presalernitano. Secoli IX, X e XI*, Roma 1956 («Storia e Letteratura» 53); for mss. in France, Ernest Wickersheimer, *Les manuscrits latins de médecine du haut moyen âge dans les bibliothèques de France*, Paris, 1966.

<sup>5</sup> Abbreviations follow the lists of the *Mittellateinisches Wörterbuch (Abkürzungs- und Quellenverzeichnis*, 2. verbesserte und erweiterte Auflage, München, 1996) and the *Thesaurus linguae Latinae (Index librorum*, Leipzig 1990) while those for Greek works are at times fuller than those in Liddell-Scott-Jones, *A Greek-English lexicon*, Oxford, 1940 (and the revised supplement of 1996).

<sup>6</sup> An online catalogue of the medical mss. in the Harley collection produced by Dr. Laura Nuvoloni is available on the website of the British Library, London, United Kingdom.

<sup>7</sup> Apart from capitalizing proper names and introducing a modern style of punctuation, I have, in the following transcriptions of the Latin texts, only silently expanded abbreviations (and replaced the manuscript's symbol for *drachma* with <>) but have otherwise made only minute changes in the spelling, usually documented in the footnotes.

<sup>8</sup> Their preparation is described e.g. in Gal. *ther. ad Pis. 19. 14.290-293 K* and Paul. *Aeg. 7.11.6.*

<sup>9</sup> The numbering follows the sections in a text from a ms. in Uppsala (U) that overlaps with C and will be presented later. Punctuation is modern; other changes have as a rule been indicated in the notes.

<sup>10</sup> digessionem C.

nentur impedimento frigoris aut spisitudine flegmatis. Hi[v] ipsi e contrario profluuum sanguinis conpescunt. Vitam longiorem absque <a>egritudine conserbant, ita ut a quibusdam appelletur antidotus immortalis. Mihi autem uidetur etiam menti ipsi ad intellectum uel memoriam prodesse.

**17.** Si quis uero de<sup>11</sup> his primo iejunus gustauerit, aduersus omne[m] ue- nenum et serpentum uirus inueni- etur inuictus neque mori ueneno poterit, prēcipue si renobata crebro confectione[m] corpus suum fre- quentius uirtute<sup>12</sup> horum temperet secundum exemplum Mitridatis regis Ponti, qui uictus a Romanis dum uenenum dup[pl]ici uel triplici bibisset<sup>13</sup> mensura, mori non potuit, sed uiuus comprehensus uix ferro peremptus est.<sup>14</sup>

**18.** Set nec a cane rabioso ledi poterit, qui his fuerit usus. Si quis etiam morbo egritudinis temptatus utatur iejunus, expellit malum, maxime ut<sup>15</sup> misceat †smyridos†<sup>16</sup> tes poas.<sup>17</sup> Ad elefantiosos quoque magni sunt, ebrietate<m> etiam expellunt. Aliibus autem prestant ut, <si> sint in plurima <aegritudine>,<sup>18</sup> minima<sup>19</sup> ne patiantur et reuocentur ad

ministered on a daily basis. They make *phlegma* flow quite well and menstrual fluxes which are kept back through hindrance of cold (conditions) or by the viscosity of the *phlegma*. These same salts, on the other hand, check bleeding. They prolong life without sickness to such an extent that some call them the antidote of eternal life. In my opinion, they also benefit the mind's power of reasoning and memory.

**17.** If someone takes them on an empty stomach before being exposed, he will prove unassailable against all kinds of poison and snake venom, and cannot die from poison, especially if he has conditioned his body with their power by frequently renewing the preparation, in keeping with the example of Mithridates, King of Pontos, who, when conquered by the Romans, when he had drunk a double or triple measure of poison, could not die (i.e. could not take his own life), but was taken alive and only with difficulty killed by the sword.

**18.** Whosoever has taken them cannot be hurt by a mad dog. Also if someone, attacked by disease, ingests them on an empty stomach, it drives out the bad element, especially if he mixes †emery-powder† with them. Against cases of leprosy also, they are great, they drive out even the effects of too much drinking. In some people they bring it about that if they are very sick, they suffer

<sup>18</sup> temptau.

<sup>19</sup> minime trad., correxi.

pristinam sanitatem, quomodo †hec seruauit<sup>20</sup> etiam magnus ille Pardalas. Dentes uero non solum semper candidos prestabunt, uerum et firmos atque <in>uulnerabilis reddent, caput quoque mundant et oculos siccant, renes purgant, lapides ex ipsis comminuunt et ad pristinam<sup>21</sup> sanitatem etiam ualde infirmos renes reducunt.

**19.** His autem qui subito tenebras oculorum et grauitudinem capit's patiuntur et longam dolorem et qui empilemicti sunt, nihil aliud ita remedio est, si quis per annum his iugiter utatur, ita ut initio mel cyatum unum prius masticet et ita utatur ipsisa bundanter. Sciat et <h>ypaticos et colicos et auriginosus per hoc curatos. <H>ydropicos sicca<n>t, colera frigida conpescunt, et qui bulimum hoc est famem maximam ex frigdore patiuntur, curant, et uię plene frigoribus facilius eorum consolatione transeguntur. Sudores de corde egredientes conpescunt et tussim umec tam exsiccant. Scio autem eos qui uomebant sanguinem iam deficiente's mirabiliter sanatos et paulatim reuocatos ad cibum.

**20.** Paralyticos autem ad calorem corporis et ad sanitatem reducunt perfectam. Ad podagram autem et maxime initium habentem et ad omnes iuncturas uel articulos hec optima cura inuenta est uel quidam dulcis modus cibi. Admoneo sane ut frequenter utatur his salibus qui podagra caruerit. Quid plura? Hi[i] sales omnes fere egritudines curant.

very little and are restored to their former healthy state, as the great Pardalas is on record. As for the teeth, they will not only render them clean and white at all times, but will also make them firm and unavailable. They also cleanse the head and dry the (watering, inflamed) eyes, purge the kidneys and break up stones (coming) from them and restore even very sick kidneys to their previous health.

**19.** For those who suffer sudden blackouts and heaviness in the head and chronic headaches and who are epileptics, nothing else is so beneficial, if they take them constantly all year long, to start with first chewing a *cyathus* of honey and then using them (the salts) in generous amounts. One (the patient?) should know that (even) liver disease and bowel disease and jaundice have been cured by this; they dry up dropsy, contain cold bile and they treat those suffering *bulimus*, that is excessive hunger caused by cold weather, and their soothing effect makes it easier to travel on roads with a lot of frost. They check sweating coming from the heart and dry up a moist cough. And I know cases of patients, who were vomiting blood and already near death who were restored to health in a miraculous way and were little by little brought back to eating food.

**20.** They restore paralytics to bodily warmth and perfect health. For gout, especially in the early stages, and all (problems in) joints or limbs, this has been found the best treatment, and even a pleasant form of food. I urge of course that a patient free from gout should use these salts often. Need I say more? These salts cure almost any condition.

<sup>20</sup> seruabit trad.; an hoc seruauit aut obseruauit? De forma quadam passiuia cogitauit V. Nutton, e.g. praeseruatur.

<sup>21</sup> primam C, corr. U.

The most important item in this list of the positive effects of theriac salts<sup>22</sup> is the mention of Pardalas, ‘the famous, great Pardalas’.<sup>23</sup> As we read in PIR<sup>2</sup>C 951, a person with this name was a friend both of the rhetor Aelius Aristides and of C. Iulius Severus,<sup>24</sup> proconsul of Asia in 151/152 (born ca. 90 A.D.). But this Pardalas (Ti. Claudius Pardalas)<sup>25</sup> was also the *strategos* (the highest civil office) of Pergamum in the time of Antoninus Pius and held various offices as a priest. So we learn here that this Pardalas used the salts regularly to good effect. The number of people with that particular name, all associated with Asia Minor, is small, and if we look for a famous one, this is the one we will surely pick. In our passage, he must have been mentioned as someone to recommend the preparation, a kind of name-dropping not uncommon in Galen. Nevertheless – there is no mention of Pardalas in Galen’s works as we have them.<sup>26</sup> Pergamum as the centre of Pardalas’ activity, and at the same time the birthplace of Galen and theatre for some of his exploits as physician to the gladiators there, make both the identification of Pardalas and the assumption that he figured in one of Galen’s works more likely. That work could be *de theriaca ad Pisonem*, in a form different from that printed in Kühn, containing the passage quoted above in Latin, or (as Vivian Nutton suggests),<sup>27</sup> *de antidotis*.<sup>28</sup> It is hard to imagine that someone at a later date would have known enough about Pardalas to forge a passage with information which is irrelevant in this context, with the intention of passing it off as genuine Galen.

We find a fuller version of the benefits of theriac salts in Aetius. At present, the only text of Aetius accessible for this part of his work is the Renaissance translation by Janus Cornarius,<sup>29</sup> where it is ch. 97 of book 13, entitled *Sales Theriaci ex libris Martiani*,<sup>30</sup> *cum quibus consentit Galenus*. But while Mithridates is mentioned here as well (without details of his death), the name of Pardalas is absent. When we talk about Greek sources, this must be understood with the *caveat* that the immediate source for the Latin text could also have been the source shared with Galen (and Pseudo-Galen), and not the Greek text of Galen (and Pseudo-Galen) proper.

<sup>22</sup> As far as I can see, Gal. *ther. ad Pis.* 15-16, 14.270-284 K.

<sup>23</sup> I am deeply grateful to Glen Bowersock and Christian Habicht, *professores emeriti* at the Institute for Advanced Study in Princeton (NJ), for their help with the identification of Pardalas. Cf. Maria Domitilla Campanile, *I sacerdoti del koinon d’Asia*, (*I sec. a.C.-III sec. d.C.*), Pisa, 1994, pp. 86f., no. 75, and, for the name Pardalas itself, Louis Robert, *Noms indigènes de l’Asie-Mineure gréco-romaine*, Paris, 1963, p. 172.

<sup>24</sup> Cf. Friedrich Münzer, C. Iulius Severus [Severus 484], *RE* X, Stuttgart, 1918, cols. 811, 67-820, 45.

<sup>25</sup> MAMA IX, London 1988, no. 18-21, esp. no. 21 p. 10.

<sup>26</sup> For the last comprehensive account on the contemporaries of Galen see Heinrich Schlangen-Schöningen, *Die römische Gesellschaft bei Galen : Biographie und Sozialgeschichte*, Berlin-New York, 2003.

<sup>27</sup> *per litteras*.

<sup>28</sup> Jean-Marie Jacques, *Le manuscrit de Florence « Laurentianus gr. » 74.5 et les écrits galéniques sur la thériaque et les antidotes*, «REA» 101, 1999, 523-531, sheds important light on the transmission of these works and discusses possible surplus material, this time coming from the Florence Greek ms.

<sup>29</sup> Special thanks to Anna Maria Ieraci Bio, who kindly supplied me with a Greek text of the passage in question from the materials left by Alessandro Olivieri (who was unable to finish his edition of books 9-16 of Aetius). The Latin text is available from the BIUM site cited in note 1 above.

<sup>30</sup> Perhaps we should read Markianos (this one not in RE), as in Scribonius Largus 177 (PIR<sup>2</sup> Marciannus 208) and in the Greek ms. of Aetius (unspecified) used by Olivieri.

## II.

The text that immediately precedes the properties of theriac salts in the same Monte Cassino ms. 69 (no. 24, p. 278a-281a) deals with the theriac proper under the title *Antidotus mitridatis*. It is not the same as the recipe transmitted only partially by Scribonius Largus (170) or any of those discussed by Laurence Totelin,<sup>31</sup> and is likewise different from the one found in Celsus *med.* 5.23.3A-B.<sup>32</sup> Aetius 13.91 does not ascribe it to anyone in particular, but obviously transmits the same text including a few ingredients now absent from the Latin version in *Cass.* 69. The Greek in Ps.Gal. *ther. ad Pamph.* 14.308.3-309.3 K (Paul. Aeg. 7.11.5 p. 294.5-19 Heiberg) is closer to our Latin text than Gal. *ther. ad Pis.* 2.12, 14.259.11-260.11 K. The indications match the text in Ps.Gal. *ther. ad Pamph.* 14.301.5-305.8 K to a surprising extent. Again, the Latin Aetius (13.91 for the recipe, 13.96 for the indications) provides a close and occasionally more detailed parallel.

Antidotus Mit<h>ridatis theriae diec<id>no<n> (= θηριακὴ διέχιδνῶν)

<sup>31</sup> Laurence M. V. Totelin, *Mithridates' antidote – a pharmacological ghost*, «Early Science and Medicine» 9, 2004, pp. 1-19, with the relevant bibliography, which I shall not repeat here. To it may be added Lutz Winkler, *Die Galenschrift 'De Antidotis'. Ein Beitrag zur Geschichte von Antidot und Theriak*, diss. rer. nat. Marburg/Lahn 1980, which contains a German translation of, and notes on, this treatise. A compact survey of what we know about Mithridates is in Max Wellmann's chapters on medicine in Franz Susemihl, *Geschichte der griechischen Litteratur der Alexandrinerzeit*, zweiter Band, Leipzig, 1892, p. 415 n. 3. Absent from both Totelin and (surprisingly) Wellmann is Marcell. *med.* 36.12, who has a *Compositio Mithridatica ad podagrum et neruorum dolores et contractiones*.

<sup>32</sup> Celsus has only three antidotes, the one preceding that of Mithridates is by Zopyros. For Scribonius' version of Zopyros' antidote, not preserved in the mainstream transmission, see my article *Die Antidotos des Zopyros und andere Fundstücke zu Scribonius Largus*, in *Language and Context in Latin Medical Texts of the Pre-Salernitan Period*, ed. David R. Langslow (in press).

<sup>33</sup> Greek drug names are often only transliterated and not translated and thus keep their Greek genitive singular terminations. This must be intentional, because a translator, even if he was not sure about the meaning of a particular Greek drug name, would know that *chylu* should be *succi* in Latin.

<sup>34</sup> agaricu (ἀγαρικοῦ, a tree-fungus, but in Latin also referring to *Vitis alba*), also found in Gal. *ther. ad Pis.* 12, 14.259.15 K., should perhaps be emended to ἀμαράκου (marjoram) in Gal. *antidot.* 1.10, 14.52 K, Gal. *ther. ad Pis.* 13, 14.263.1 K, and Ps.Gal. *ther. ad Pamph.* 14.306.11 K.

<sup>35</sup> Abbreviation for *crocus*.

<sup>36</sup> Abbreviation for ginger; the Latin may be *zinziberis*, *zingiberis*, *gingiberis*.

**15.** Conuenit autem his qui causa<m> renum<sup>45</sup> patiuntur et ad dysentericis et calculosis et susprium habentibus et ad eos qui circa splenem aut recentem aut multi temporis malitia<m> sustinent. Ad eos qui subito patiuntur, cum oxymelle detur. Oximelle autem fiat de fauis<sup>46</sup> expressum.

ture it cannot be pushed out. It is administered in such a way that either rue or diptam is boiled in honey-water or in some sweet liquid, and in this liquid the quantity specified above is dissolved.

**11.** Patients with dropsy or jaundice are given it in such a way that hazelwort is boiled and they receive it (the medicine) with this. To patients with dropsy, however, it is given in such a way that before eating the patient swallows it undiluted; other doctors dissolve it in one *cyathus* of *posca* (a mixture of water and vinegar). And it makes the whole body strong by reducing the liquid and restores health.

**12.** For those with a voice impediment, it is kept under the tongue with a double amount of tragacanth, like an *arteriake* (a preparation for the windpipe), and it dissolves little by little and is swallowed, or in any it may be drunk by itself with honeyed wine or something sweet.

**13.** Against the bringing up blood, be it from the chest or the lung, it is to be administered with *posca*, if the condition is not of long standing; if it is a chronic problem, with three *cyathi* of water. It is very good if in the water a herb called *sympyton*<sup>47</sup> is boiled and given the amount specified above given in the manner of a potion at night or in the morning.

**14.** I am aware that our teachers rubbed the thorax in front and behind in circles with a lot of this medicine, because this is beneficial in many ways.

**15.** It is good for those suffering a kidney condition and for those with dysentery, calculi and asthma, and for those who suffer from a disease around the spleen of short or long standing. For those suffering an acute onset, it should be given with honeyed vinegar, and the honeyed vinegar (i.e. the honey) should be pressed from the honeycomb.

<sup>45</sup> causā renūma uault Ferraces Rodríguez.

<sup>46</sup> fabis trad.

<sup>47</sup> The word has several meanings and may refer to comfrey or liquorice here.

16. Hoc autem et <H>ypcocratis in ordinatione diete medicinalis dicit,<sup>48</sup> ubi et de acito scillitico in medio cyato. Ad suspirium ergo uel calculum patientes uel cum aqua discocta apii aut petroselini, ad renum dolorem cum ynomeli, ad disintericos autem in aqua cum ros<s>yriaco discocta, ad epilemnicos uero qui modicam nausiem patiuntur in melicrato, qui uero mutam cum spisso flegmate, in oximelli ut supra dictum est.

17. Quidam autem perfectorum medicorum in his dant prius sinapi gargarizare et sic potionem ad nocte<m> cum aqua, grece fabe magnitudine. Per omnia autem sciendum quod, ubi omnia adiutoria medicin ab gritudine fuerint superata, h c antidotus etiam desperatis mirabiliter prodest.

16. Hippocrates in his recommendations of a medical diet says the same, and there he also mentions squill vinegar, half a *cyathus*.<sup>49</sup> Therefore, for asthma or calculi with a decoction of celery or parsley, for kidney pains with honeyed wine, for patients suffering from dysentery with a decoction of sumac, for epileptics who suffer from moderate vomiting in honeyed water, those with pronounced vomiting with viscous phlegm, in honeyed vinegar, as stated above.

17. Some very experienced doctors give, in such cases, first mustard as a gargle and afterwards at night the potion with water, the size of a Greek bean. Overall, it must be realised that, whereas all (other) medical aids have been defeated by the disease, this antidote is wonderfully effective even in desperate cases.

### III.

The first three ingredients of the antidote we just examined are the *artisci scyllitici*, the *artisci theriaci* and the ἡδυόcmou μάγμα. (Instead of ἀρτίκοι, these may also be called γκυκλίσκοι or τροχίσκοι). Their preparation is described twice in a ms. written in Vendôme, Vindoc. 109 (s. XI ex./XII in. = V, referred to with the number of the recipe), but the same text is already found in the much earlier *Lorscher Arzneibuch* (Recept. Lauresh.,<sup>50</sup> Bamb. med. 1 = B), a ms. written in the imperial monastery of Lorsch (near Worms) during the very first years of the 9<sup>th</sup> century.

We begin with the recipe for the ἡδυόcmou μάγμα (described most fully in Aët. 13.89 lat.), which occurs four times in the Vendôme antidotary (the numbering is mine):

<sup>48</sup> Hipp. acut. (sp.), see A. Anastassiou, D. Irmer, *Testimonien zum Corpus Hippocraticum. Teil II: Galen. 2. Band: Hippokrateszitate in den übrigen Werken Galens einschließlich der alten Pseudo-Galenica*, Göttingen 2001, p. 24.

<sup>49</sup> Gal. *antidot.* 1.10, 14.51 K.

<sup>50</sup> Edited by Ulrich Stoll, *Das 'Lorscher Arzneibuch'. Ein medizinisches Kompendium des 8. Jahrhunderts* (Codex Bambergensis medicinalis 1. Text, Übersetzung, Fachglossar, Stuttgart, 1992 (Sudhoffs Archiv. Beiheft 28). Special thanks to him for supplying me, many years ago, with an electronic version of the text, which has proved invaluable for my work.

**13.** Trociscos idrico*i*

h c: Aspal<α>ti radices d. XVIII, cortice<sup>51</sup> calami aromatici, costum, asarum, fu, agaricum, mastice, xilobalsamum ana d. XVIII; squinantes ÷ IS, cinnamomum = III, cassia = IIS, ammoniaci gutta, spica nardi ana = IIS; folio ÷ I, murra = III, crocum ÷ IS.

Cum uino Falerno teris. Colligis intingendo digitum in opobalsamo. Facies trociscos unciarum trium et siccas in umbra.

**104.** Trociscos idroco*i*

h c: Aspalat[r]i radices d. XVIII, cortice calami aromatici, costum, asarum, fu, agaricum,<sup>52</sup> mastice, xilobalsamum ana d. XVIII; squinuantum ÷ IS, cinnamomum<sup>53</sup> ÷ III, cassia ÷ IIS, ammoniaci gutta ÷ IIS, spica nardi ÷ IIS, folium ÷ I, mirra ÷ III, croco ÷ IS.

Cum uino Falerno<sup>54</sup> teris. Colligis intingendo digito<s> in opobalsamo. Facies trociscos unciorum(?) trium et siccas in umbra.

Recept. Lauresh. 4.73 is quite similar, while the following recipe (79.) in the Vendôme antidotary deviates slightly; the last (9.) is quite different.

**179.** Confectio yd<ic>ro<u> magnatis

h c: Aspalat[r]i radix, calamo aromatico, costum, xilobalsamum, fu, mastice ana VI; cassia XXVI, reuponticum XIII, squinuantum III, mirra XV, amomum XXIII, folium VI, crocum XIII. Conficis<sup>55</sup> cum uino odorato et fac trociscos et siccabis ad umbra<m>. Virtutem habet calidam; humectat confortat et intrat in ant. epithima [h]i<d> quod<sup>56</sup> dicitur pol[ll]ithaumastu<m>.<sup>57</sup>

**19.** Trociscos idiocri qui per mensuram intrat in eodem antidoto

h c: Murra III, amomum VI, cassia III, spica nardi, costum, iusquinami,<sup>58</sup> balsamum ana II; folium, crocum ana III; asarum IS, xilobalsamum, fu ana IS; mastice I. Conficis ista omnia cum uino uetere et fac trociscos et siccabis fumigio storacis aut confice †timiamathis.

The next item on the list are the *trocisci theriaci*. The Latin text in the Vendôme antidotary (4. and 105.) is certainly nearer Ps. Gal. *ther. ad Pamph.* 14.307.4-16 K than Gal. *ther. ad Pis.* 13. 14.264-267 K, or Gal. *antidot.* 1.8, 14.45-49 K, and cannot come

<sup>51</sup> This should probably go with *aspalathi radicis*, i.e. *aspalathi radicis corticis*, as it now does in the Greek.

<sup>52</sup> ὄμφαράκου (marjoram) in Gal. *antidot.* 1.10. 14.52 K, Gal. *ther. ad Pis.* 13.14.263.1 K, and Ps. Gal. *ther. ad Pamph.* 14.306.11 K, so ὄγαρτικοῦ (a tree-fungus, but in Latin referring to *Vitis alba* as well), also found in Gal. *ther. ad Pis.* 12. 14.259.15 K, should probably be emended.

<sup>53</sup> In the ms., a dot above and one below =, as in all other cases where I print simply =.

<sup>54</sup> Thus also Gal. *antidot.* 1.10, 14.52 K and Gal. *ther. ad Pis.* 13, 14.263.3 K.

<sup>55</sup> conficit trad.

<sup>56</sup> qui trad.

<sup>57</sup> The TLG has no attestations for πολυθαύμαστος in Greek texts before the middle ages.

<sup>58</sup> iusquanti trad.

from Paul. Aeg. 7.7.4; it is found again in Recept. Lauresh. 4.72.

Recept. Lauresh. 4.72 and Vindoc. 109 antidot. 4/105

### Trocisci tiriaci

Recipe uiperas ruboraneas nuper comprehensas IIII aut V, nam illas de clausura acriorem uenenum habent, sicut ex ieunio hominibus fit amaritudo, et dum comprehensas fuerint, IIII digitos a capite mensuras et incidis et IIII a cauda, et projecto capite et cauda reliqua pars quae remanserit radis et exenterabis diligenter et laubabis et mittes in olla rude adiecto oleo et aneti surculo et sale modico, et coquis sicut anguillas et postea leuas et tollis ossa earum et proicis. Carnes autem quantum pensauerint tantum bucellati mundi medulla admiscis et teris ita ut umectis manibus in opobalsamo trociscos facias unciarum trium et siccas.

Finally, the squill pills, found in the Vendôme antidotary (5. and 106.) and in Recept. Lauresh. 4.72. These three texts hardly differ from one another, which is why I only print one. The source will again have been Ps. Gal. ther. ad Pamph. 14.306.17-307.4 K rather than Gal. ther. ad Pis. 13, 14.263 K or Gal. antidot. 1.9, 14.49-51 K and, because of σκίλλαν πήλῳ ἡ στέατι περιπλάσας ὄπτησον συμμέτρωσ, cannot have been Paul. Aeg. 7.11.3. The version in Aet. 13.88 Lat. is fuller and different.

### 5. Trociscos scillitici

Squilla<m> inuoluis in argilla et mittis in fornace ardente balnei et dimittis tota nocte. Alia die interiora eius tollis et pensa<s> = XV <et> herbi farina = XVI. Teris simul et facis<sup>59</sup> trociscos untiarum sex et siccas in umbra. Isti tres trocisci recipiunt<ur> in tyriaca.

### IV.

We now return to the benefits of the theriac salts. This section is merged, without salts being mentioned, with another recipe ascribed to Mithridates,<sup>60</sup> the «antidote

<sup>59</sup> facit trad., corr. V *infra* et B.

<sup>60</sup> It is rather surprising that none of the antidotaries edited by Henry E. Sigerist (*Studien und*

with one-hundred ingredients»(έκατονταμίγματος).<sup>61</sup> It is not the Μιθριδάτου ἀντίδοτος of Galen *antidot.* 2.9, 14.54.9-155.9 K, but rather the ἀντίδοτος ἔκατονταμίγματος. φ χρῶμαι (i.e. Galen), ἦν ἐσκεύασα Καίσαρι ..., Gal. *antidot.* 2.9, 14.155.10-158.3 K. In Latin mss. I have been able to examine so far (i.e. Uppsala C 664<sup>62</sup> = U; London, British Library, Sloane 1621<sup>63</sup> = S; Vendôme 109 = V, where the text occurs twice, in *antidot.* 6 and *antidot.* 30, referred to as V6 and V30), the name of the author of the recipe is always given as Mithridates. The oldest of these four witnesses, the Upsaliensis C 664, dated to the 10th / 11th century,<sup>64</sup> ends with a long list of indications absent from Galen's Greek. As we see from the parallel text in Cass. 69 printed and discussed above, this list rather enumerates the properties of theriac salts, whose composition is not given at that point in any of the mss. But where we find the prescription for the preparation of these salts, in Galen and in Paul of Aegina, there is no account of their benefits.

Let us start with the Latin text from the Uppsala codex (pp. 95a-97b), and only later turn to the other three witnesses.

- |  |  |
|--|--|
| 1. Antidotum Mitridatis regis qui recipit species centum | 1. The antidote of King Mithridates, which is composed from a hundred ingredients. |
|--|--|

*Texte zur frühmittelalterlichen Rezeptliteratur*, Leipzig 1923 [Studien zur Geschichte der Medizin. 13], repr. Vaduz 1977) seems to have included Mithridates' famous antidote in whatever version. This may also be taken as a hint that it is high time for medical historians and medieval Latin (and Romance) scholars to venture beyond what was, after all, Sigerist's *labor iuuenilis*.

<sup>61</sup> We read about another ἐξ π' συγκειμένην in Gal. *antidot.* 2.17, 14.205.1 K. The word ἔκατονταμίγματος is not in LSJ (including the revised supplement of 1996), or in Richard J. Durling, *A dictionary of medical terms in Galen*, Leiden etc. 1993, but in the new *Diccionario griego-español* (DGE), while the *Vocabolario della lingua greca* (GI) by Franco Montanari, con la collaborazione di Ivan Garofalo e Daniela Manetti, 1996, posits a lemma ἔκατοντάμιγμα, with the (correct) page references to Galen 14.155 and 14.205 K; the compilers of the *Vocabolario* must have had a bad day! We may also forgive Totelin (p. 18) for translating διὰ σκίγκου διὰ in the title of this recipe (Gal. *antidot.* 2.9, 14.152-154 K) as 'through skink' (followed by the more appropriate paraphrase «an antidote made with skink»), but see LSJ s.v. διά A III.2 «in later Prose, of Material *out of* which a thing is made», and Bailly s.v. διά B III 3 «en parl. de la matière au moyen de laquelle on fait qqe chose, ou que l'on mêle à qqe ch.». In recipes, it should be rendered as 'containing' or 'based on', see DGE s.v. διά II 2.

<sup>62</sup> The entry in Margarete Andersson-Schmitt, Håkan Hallberg and Monica Hedlund, *Mittelalterliche Handschriften der Universitätsbibliothek Uppsala. Katalog über die C-Sammlung*, Bd. 6. Handschriften C 551-935, Stockholm, 1993 (Acta Bibliothecae R. Univ. Ups. 26:6), pp. 239-243, does not add much to the account in Beccaria, pp. 344-350. «Il testimone ... è vergato con una penna mozza in una carolina che pare databile a un periodo di transizione fra i secc. X e XI; la datazione più alta può essere stata suggerita dalla g di forma 'semionciale', che però è interpretabile come dovuta a un influsso di una minuscola insulare, riscontrabile anche in base ad altri elementi (così ancora la Prof. Supino Martini)» is the opinion of Annalisa Bracciotti, *L'apporto della tradizione indiretta per la costituzione di un testo critico delle Curiae herbarum*, «Rivista di cultura classica e medioevale» 42, 2000, pp. 61-102, at p. 62 n. 8.

<sup>63</sup> The old catalogue of the British Library says «Membranaceus, in 8vo., ff. 111, sec. fortassis X; hic illic mutilus; olim Thomae Jones»; s. XI (thus Beccaria, p. 260) seems more likely.

<sup>64</sup> Maria Frederiksson, *Esculapius' De stomacho*. Ed. with an Introd., Transl., and Comm. by M. F., diss. phil. Uppsala, 2002, dates it considerably earlier, 2<sup>nd</sup> half of the 9<sup>th</sup> century.

Qui facit ad omnia mortifera potiones et omnia mala medicamenta et a<d> serpentium morsu et ad spalangionis morsu et ad caducos et ad lunaticos et ad typum cottidianum, tertianum et quartanum, et ad paralisin et ad nefreticos et ad cauculosis et ad nescia et ad podagricos et ad arteticos et ad eos qui cibum non contine<n>t et ad splenem et epaticos et ad sciaticos et qui malum colorem habe<n>t et ad ple<u>risin et sanguinem uomenibus.

It is effective against all lethal draughts and all poisons and against bites of snakes and venomous spiders, and for epileptics and lunatics, and for day-fevers as well as tertian and quartan fevers (i.e. malaria), and for paralysis, and for kidney-disease, and for urinary stones, and for sciatica,<sup>65</sup> and for gout, and for patients affected by diseases of the joints and for those who cannot keep down their food, and for diseases of the spleen and liver, and for sciatica, and bad skin colour (i.e. cachexia), and for pleurisy and spitting of blood.

When we later compare the other two manuscripts, we will notice that U gives us a transcription rather than a translation of the Greek words in the recipe itself, a phenomenon that occurs in other places as well but has, to my knowledge, not been studied so far. Even very common words that must have been known to any translator, like *rodon siron* (ρόδων ξηρῶν, dry roses, i.e. rose petals) or *risis* (root, i.e. ρίζης), were left in their Greek forms.<sup>88</sup> This also raises the question how people with no or only a very rudimentary knowledge of Greek could have made sense of these recipes.

I will now briefly turn to the relationship of our four Latin witnesses. S and V6 form a separate branch that is opposed to U and V30:<sup>89</sup>

(3.) centumfolia<sup>90</sup> (centuf- S) d. II SV6: βαλανετίου Gal. : *om.* V30

(3.) rapae semen d. VIIII (VIII S) SV6 : congilidos sperma < VIIII V30 : gongylidis

<sup>81</sup> Cf. Gal. *antidot.* 2.9, 14.154 Ταύτη ὁ βασιλεὺς Μιθριδάτης ἀεὶ ἔχρητο προφυλακῆς χάριν θανατίου. ἡνίκα γοῦν ὑπὸ Ῥώματων ἐάλω, δἰς πιὼν θανάτιμον, καὶ μὴ δυνηθεὶς ἀποθανεῖν, ξίφει ἐσυτὸν διεχρήσατο. The same story in a longer version at Gal. *ther. ad Pis.* 16, 14.283-284 K.

<sup>82</sup> uictus a Romanis C luetur et ronus U.

<sup>83</sup> quis C.

<sup>84</sup> morbo U.

<sup>85</sup> temperatur U.

<sup>86</sup> *om.* C.

<sup>87</sup> corr. C.

<sup>88</sup> In 5., however, U has *cicute*, but V6 *conii* (*conu* V30)!

<sup>89</sup> There is some loss of text at the top of pages in this part of Vindoc. 109. For the present purpose, I will write *om.* for something that cannot be read in the ms., irrespective of whether the text in question could have fitted the mechanical lacuna caused by the crumbling or damaged parchment.

<sup>90</sup> For plant synonyms, I refer once and for all to Jacques André, *Les noms de plantes dans la Rome antique*, Paris, 1985; for the early middle ages, his earlier *Lexique de termes de botanique en latin*, Paris, 1956, is still useful because it lists terms not found in the later work. Unless I comment specifically, I assume that the different words in the three mss. refer to the same plant.

- horticae<sup>91</sup> (coconidio ortice *trad.*, *correxi*) semen < VIII U γογγυλίδος σπέρμα Gal.
- (5.) conii semen discoriatum d. II V6 : coriandri (*falso*) discoriati d. II S : conu<sup>92</sup> sperma < I V30 : cicute semen < I U κωνείου πέρματος ἐπιτιμένου Gal.
- (6.) feniculi semen SV6 : maratri sperma V30 : μαράθρου σπέρματος Gal.
- (7.) anatis (anati<s> S) sanguine SV6 : theriacis V30 : tiriacis U νήσης αἴματος Gal.
- (7.) xilobalsamum (balsami ligno S) cum cortice d. III (III V6) SV6 : xilobalsamum ... ana < III : xilobalsamo ξυλοβαλσάμου Gal.
- (7.) orobo albo < VII S : herbi albi d. VII V6 : orobi leuci < V V30 : orobon leuco<n> < V U ὄρόβων λευκῶν ἵκον (= < VIII) Gal.
- (8.) petrosilino d. III S : petroselinum macedonicum d. III V6 : *om.* V30 : petroselino < VI U πετροσελίνου Gal. (πετροσελίνου Μακεδονικοῦ Andromachus apud Gal. *ther. ad Pis.* 12, 14.259 K)
- (8.) piperis longi (piper longo S) d. II SV6 : piper album < III piper longum < III V30 : piper albo < III piper longo < III U πεπέρεως μέλανος τριώβολον καὶ λευκοῦ δόβολον γ' καὶ μακροῦ ἀ' VGal.
- (8.) rosae aridae d. III SV6 : rodon xiron < VI V30 : rodon siron < III U
- (9.) siseli<s> (sisebis S) Massaliotici (masileuntici S massileontici V6) SV6 : siseleos V30 : siseleos masapofi U : cūcēλεως Gal.

cīcelei δὲ τὸ Μεσσαλιωτικόν, πετροσέλινον δὲ τὸ Μακεδονικόν is Galen's recommendation at *san. tuend.* 6.282.7 K, and may well have been in the Greek text of Gal. *antidot.* 2.9, as they are in the theriac salts of Gal. *ther. ad Pis.* 19, 14.293 K. The examples quoted above also remind us that antidotaries were composite works, which may well transmit the very same recipe from various sources and in slightly different form, as happens in the case of *antidot.* 6 and 30 in Vendôme 109 (and with the *trochisci* discussed earlier).<sup>93</sup>

<sup>91</sup> This adds another attestation for *horticus*, *a, um*, 'garden-' , cf. Ehlers in the ThL s.v.

<sup>92</sup> i.e. *conii* misread.

<sup>93</sup> This article was written during my stay as a member of the School of Historical Studies of the Institute for Advanced Study in Princeton, New Jersey, and it is with great and sincere gratitude that I remember the kind and efficient support provided by this institution (not least for revising the English). My stay was also made possible by a grant of leave of absence from the ministry of cultural affairs of the Rhineland-Palatinate, where I usually work at the Johannes Gutenberg University of Mainz. The article also forms part of my research in the context of the project *Textos médicos latinos de los siglos VI-XI: transmisión, edición crítica y estudio léxico* of the Spanish Ministerio de Educación y Ciencia-FEDER (HUM2006-13605-Co2-01), directed by Arsenio Ferraces Rodríguez, Universidade da Coruña, Departamento de Filoloxía Espanola e Latina, Facultade de Filoloxía, A Coruña. Arsenio, whose stay partly coincided with mine, saved me from a number of incorrected readings in C, which he reexamined. The text of this paper has profited from discussions with him and comments made, and improvements suggested, by colleagues in the British Isles, David Langslow (who spent much time on improving my translations from Latin into English), Vivian Nutton, and Simon Swain, for which I offer my sincere thanks.
