The Cardiology is recruiting for the Clinical Epidemiology and Systems Medicine a:

PhD Student (m/f/d)
Reference: 50118806

Your tasks:
- Investigating the role of autonomic dysfunction in different forms of heart failure using the cohort study and biodatabase "MyoVasc" (www.myovasc.de) funded by the German Center for Cardiovascular Research (DZHK)
- Preparation of study data including the creation of data sets for statistical analysis
- Performing and interpreting scientific analyses
- Presenting results in internal meetings, meetings with project partners and at national and international congresses
- Writing scientific publications

Your profile:
- Completed university degree (M.Sc., M.D. or equivalent) in the field of epidemiology, (bio)medicine, health/life sciences or a comparable scientific discipline
- Strong interest in biological, medical and biomedical research
- Structured and independent way of working
- Good analytical thinking and fast comprehension skills
- Social competence, ability to work in a team, creativity and personal initiative
- Knowledge of the German language is not mandatory, but excellent knowledge of written and spoken English is required

We offer:
- An interesting and varied job in an interdisciplinary team with long-standing expertise in the analysis of clinical trials and cohort studies with biomaterial banks
- Integration into a collegial and professional team
- Diverse, personal development opportunities
- Interdisciplinary work with local, national and international partners
- The position (part time 65%) is initially limited until 31.12.2022
- Stimulating, diverse and international research environment
- Competitive salary (E13) and health care benefits according to the company-based tariff agreement
- Childcare (kindergarten): if places are available
- Job ticket
